

MIRO BOARD: https://miro.com/app/board/uXjVKuRxsxs=/?share_link_id=80577280456

Miro Warmup

Instructions:

1. Find a space under the 'person' icon and add your name.
2. Add a few stickies under your name – on each sticky write a location where you currently store data (ex: google drive, hard drives, dropbox, webserver, etc.)
3. Group and discuss – each student will take a turn sharing their data storage locations, as similar items come up, add your sticky to the grouping.

Data Type Brainstorm

Instructions:

1. Using a similar format, we're going to look more specifically at the types of data we manage in our day to day lives.
2. On each sticky add one data type – this can be general groupings (ex: photos) or specific data types (ex: family recipe cards)
3. Group and discuss – each student will share their findings, as similar items come up, add your sticky to the grouping.

Access and Longevity

Instructions:

1. Using a similar format once again, we're going to think together about longevity and access of these types of data.
2. Taking the last exercise as your starting point, please think about which types of data you want to last the next 10, 50 and 100 years. Fill out the types under these areas on the board. Color code for which data should be public (green) and private (red)
3. Group and discuss – as each student shares their thoughts on longevity, group similar items from your perspective.
